Lecture 7: Signal Transduction - School of Informatics

Gerhard Krauss is Professor of Biochemistry at the University of Bayreuth (Germany). His research is centered on the mechanism of interaction of DNA binding proteins and their target DNA. He is also a gifted teacher and textbook author, and for many years has been the head of the university education committee of the German Society of Biochemistry and Molecular Biology (GBM).

Essential Biochemistry - Signal Transduction

Essential Biochemistry - Signal Transduction

Abstract. The plant hormone auxin (indole-3-acetic acid, IAA) controls growth and developmental responses throughout the life of a plant. A combination of molecular, genetic and biochemical approaches has identified several key components involved in auxin signal transduction.

A signal transduction pathway represents the flow of information in a cell. The pathway starts when a

signaling molecule or ligand binds to its receptor protein. The interaction triggers a change in the receptor that is carried or transduced to the next protein in the pathway.
