Static analysis tools are generally used by developers as part of the development and component testing process. The key aspect is that the code (or other artefact) is not executed or run but the tool itself is executed, and the source code we are interested in is the input data to the tool.

In computing, just-in-time (JIT) compilation, (also dynamic translation or run-time compilations), is a way of executing computer code that involves compilation during execution of a program “ at run time “ rather than prior to execution. Most often, this consists of source code or more commonly bytecode translation to machine code, which ...
