There is no general analytic solution for the form of $p(x)$. There are, however three special cases which can be expressed in terms of elementary functions as can be seen by inspection of the characteristic function: For $\hat{\mu} = 2$ the distribution reduces to a Gaussian distribution with variance $\hat{\sigma}^2 = 2c^2$ and mean $\hat{\mu}$; the skewness parameter $\hat{\gamma}^2$...

We examine how susceptible jobs are to computerisation. To assess this, we begin by implementing a novel methodology to estimate the probability of computerisation for 702 detailed occupations, using a Gaussian process classifier.
