A microprocessor is a computer processor that incorporates the functions of a central processing unit on a single integrated circuit (IC), or at most a few integrated circuits. The microprocessor is a multipurpose, clock driven, register based, digital integrated circuit that accepts binary data as input, processes it according to instructions ...

I've been programming microprocessors on and off for over 20 years. Started out programming in ANSI C back in the 80s. The book starts off quite well with a hold-you-by-the-hand approach up until the second project.
