which have many worked examples in physics. But typically these books don't have enough discussion as to how to set up the problem and why one uses the particular principles to solve them; usually I find that there aren't enough words included between the equations that are written down. Students seem to think so too. Part of the reason for my producing this notebook is the reaction of ...

Having spelled out the physics, for example in the form of a set of coupled partial differential equations, we need efficient numerical methods in order to set up the final algorithm.
