Basic Radiographic Procedures - Chiro

It shows positioning techniques for all standard examinations in conventional radiology, with and without contrast, as well as basic positioning for CT and MRI. For each type of study a double-page spread features an exemplary radiograph, positioning sketches, and helpful information on imaging technique and parameters, criteria for the best radiographic view, and patient preparation. Clearly organized to be used in day-to-day practice, the atlas serves as an ideal companion to Moeller and ...

Radiological Technology | Pocket Atlas of Radiographic

Parallel technique and bisecting angles are the two most common positioning techniques used in veterinary dental radiology. Parallel technique is used for imaging the caudal mandibular premolars and molars, and the bisecting angle technique is used for all maxillary teeth and the rostral mandibular teeth. The sensor/film must be correctly placed and stable. Digital sensors are thicker and less ...
