The atomic nucleus is the small, dense region consisting of protons and neutrons at the center of an atom, discovered in 1911 by Ernest Rutherford based on the 1909 Geiger-Marsden gold foil experiment.

### Atomic nucleus - Wikipedia

In physics, acceleration is the rate of change of velocity of an object with respect to time. An object's acceleration is the net result of all forces acting on the object, as described by Newton's Second Law. The SI unit for acceleration is metre per second squared ( $\text{m s}^{-2}$ ).

### Acceleration - Wikipedia

Storia. L'effetto tunnel venne utilizzato per la prima volta nel 1928 dal fisico ucraino George Gamow per spiegare il decadimento alfa, nel quale una particella alfa (un nucleo di elio) viene emessa da un nucleo perché riesce a superarne la barriera di potenziale.

### Effetto tunnel - Wikipedia

È un fenomeno fisico che si verifica quando una particella, come un elettrone o un protone, riesce a superare una barriera di potenziale anche se la sua energia è inferiore all'altezza della barriera. Questo avviene grazie al principio di indeterminazione di Heisenberg, che stabilisce che non è possibile conoscere con precisione assoluta la posizione e l'impulso di una particella.
