At birth, a baby's brain contains 100 billion brain cells â€™about the same as an adult brain. The main structures of the brain are in place about three months

### **Why does an understanding of brain development matter? How**

The development of a childâ€™s brain architecture provides the foundation for all future learning, behavior, and health. Brains are built over time, from the bottom up. The basic architecture of the brain is constructed through an ongoing process that begins before birth and continues into adulthood. Simpler neural connections and skills form first, followed by more complex circuits and skills. In the first few years of life,

brain development, because at birth, very few synapses have been formed. The synapses present at birth are primarily those that govern our bodily functions such as heart rate, breathing, eating, and sleeping. The development of synapses occurs at an astounding rate during a childâ€™s early years in response to that childâ€™s experiences. At its peak, the cerebral cortex of a healthy toddler ...
